Subject Index

5d–4f luminescence 135

Absorbance and luminescence 232
Absorption 65
Absorption spectrum 147
Acceptor dopant 396
Additional waves 167
Aggregates 389
Anion sensitivity 113
Atomic Bose–Einstein condensates 185
Aza-crown complex 101

Biexciton 174
Blue emission 232
Boson peak 418

Cavity polaritons 364
Cavity QED 181
CdSe/ZnS quantum dot 23
Charge transfer excitons 342
Charge transfer transitions 189
Charge-transfer interactions 325
Coherent and localized states 364
Compatibility and reliability of CFPs 39
Composite 11
Cryptand receptors 85
Crystal (ligand) fields 39
Cyclothiophenes 225

Dark states 185
Decay 396
Delayed fluorescence 200
Dendrimers 271
Density matrix theory 258
Density of states 418
Dichroism 239
Dielectric response 332
Dielectric tensor 207
Diindenoperylene 290
Directional dispersion 212
Disorder 189
Disordered materials 418
Distributed feedback 413

Effective magnetic field 185
EIT 174
Electrical properties 407
Electroabsorption 189
Electroabsorption spectroscopy 325
Electroluminescence 378, 396
Electromagnetically induced transparency 185
Electron energy loss spectroscopy (EELS) 284
Electronic excitation energy transfer 23
Electronic interactions 217
Emission cross section 65
Energy transfer 79, 95, 359
ESIPT 147
Eu^{3+} 101
Europium complex 11
Exciton 125, 174
Exciton diffusion 309
Exciton dispersion 284
Exciton resonances 167
Exciton transfer 258
Exciton transport 246
Excitonic strings 315
Exciton–phonon coupling 342
Exciton–phonon interaction 264
Excitons 217, 264, 271, 354

Fluorescence 65, 258, 378
Fluorescence enhancement 85
Fluorescence spectrum 147
Fluoride crystals 135
Fluorides 95

Gd^{3+} 101
Grating coupler 413
Guided wave organic laser 303

Heat treatment 31
Holmium 79
Hybrid-states 347
Hydrothermal synthesis 95
Hyperbranched polyphenylenes 232
Hyperpolarizability 389

Inner-transition metals 85
Isomers 200

J-aggregates 347, 354

Kerr nonlinearity 373

Layer thickness 407
Light harvesting 239
Lipophilic complex 101
$LiYF_4:RE^{3+}$ 39
Luminescence 11, 23, 79
Luminescence quenching 309

MCM-41 17
Methyl 2-hydroxynicotinate 147
Microcavities 347, 354, 359
Molecular aggregates 217

Nanoparticles 17
$NdGaO_3$ 39
Near-IR 253
Negative group velocity 167
Negative refraction 167
Nonlinear optics 389
Nonlinear polarization 264

OLED 407
Oligothiophenes 225
Optical absorption 225, 271
Optical indices 407
Optical properties 212
Optical spectra 207
Optical spectroscopy 39
Organic light emitting devices 413
Organic microcavities 364
Organic molecular aggregates 264
Organic semiconductors 384
Organic thin films 309
Oxygen sensitivity 101

Peierls transition 332
Phenylene dendrimers 232
Phosphorescence 200, 253, 378
Photoinduced electron transfer 85
Photoluminescence 17, 125, 253, 275, 347, 354
PMMA 11
Polariton 174
Polarization 332
Polarized transient absorption 315
Polaron 396
$PrGaO_3$ 39
Prototropic equilibrium 147
PTCDA 284, 296
Pyrido-phenol donor 101

Quantum cutting effect 95
Quantum information processing 181
Quantum interference 181
Quantum-wells 347
Quenching 275, 396

Radiative lifetime 65
Rare-earth complex 101
Relaxation dynamics 364

Self-organization 389
Semiconductor microcavity 373
Single-molecule spectroscopy 217
Singlet 378
Slow light 185
Solitary wave 373
Spatial dispersion 167
Spectroscopic ellipsometry 407
Spin injection 384
Spontaneous emission 181
Spray pyrolysis 31
Surface enhanced Raman spectroscopy 296
Surface polaritons 167
Surfaces 275

Tb^{3+} 101
Temperature dependence 200
Terbium luminescence 101
Theoretical calculations 147
Thermoluminescence 31
Thin films 31, 290, 332, 384
Time resolved luminescence 113
Time-resolved fluorescence spectroscopy 290
Time-resolved luminescence 309
Trapping parameters 31
Travelling-wave lasing 303
Triplet 200, 378
Trivalent cerium and lutetium 135
Two-photon absorption 1
Two-photon-induced polymerization 1

Upconversion 79

Vacuum ultraviolet (VUV) 95
Vibrational spectra 418
Vibronic spectra 342
Vitroceramic 79

Waveguide 413

Zinc oxide 17
ZnS 31

Materials Index

Ag 296
Alkyl sulfinyl precursor 303

Bis-styryl-benzene 1

Chromophore 1
CT crystals 315
CT excitons 325
Cu_2O 174
CuCl 174

Degenerate Fermi gases 185
Donor and acceptor molecules 342
Dopant molecules 407

Excitons 189, 239, 378, 396

Fluorides 95
Frenkel excitons 246, 284

Heavy main-group metals 85
Holmium 79
Hybrid materials 389

In 296

J-aggregates 246

Left-handed materials 167
Light-emitting diodes 384
Luminescent lanthanide complexes 113

Manganites 384
Material edges and corners 181
Mg 296
Molecular aggregates 239
Molecular crystals 284

Nanoparticles 389

Oligothiophenes 207, 212
Organic molecular crystals 332
Organic nanostructures 290

Polaritons 347, 373
Polyparaphenylenevinylene 303
Porphyrin 253
PTCDA (perylene-3,4,9,10-tetracarboxylic-dianhydride) 309
PtOEP 253

Quaterthiophene 275

Tetracene 275
Transition metals 85
Tris-(8-hydroxyquinoline)aluminum 200

Ultra-cold atomic gases 185

Vacuum ultraviolet (VUV) 95
Vitroceramic 79
